MACNICA DHW · MACNICA AMERICAS WEBSITE MIGRATION

Page Acceptance Guidelines

How a migrated Macnica Americas page is reviewed on global2, what it must meet to be accepted, and the decisions we need from Anion and Macnica Americas to finish the layout work.

For Anion and Macnica Americas

Scope The Macnica Americas pages migrated from GWI (`/content/macnicagwi/americas/mai/en`) to global2 (`/content/macnicaglobal2/americas/mai/en`), including the home page and the Products, Semiconductors, Displays, IP & Software and Macnica Products pages

Built on Anion's review comments of 21, 22, 23, 27 and 28 September 2026, and the components and settings available in global2

How to reply Section 5 asks 21 questions: 20 with lettered options and our recommendation, and one table to complete (A10). Section 6 is the answer sheet (for example *"A1: A"*)

Version 1.0 · 30 September 2026 · Prepared by Macnica DHW

   - C. Components: G10 to G16
   - D. Alignment and page settings: G17, G18
   - E. Phone view: G19
5. Questions
   - 5.1 For Anion: layout (A1 to A10)
   - 5.2 For Anion and Macnica Americas: how review works (J1 to J5)
   - 5.3 For Macnica Americas: content (M1 to M6)
6. Answer sheet

Appendix A. Reviewer checklist

Appendix B. Review comments and where each is addressed

Appendix C. global2 settings used in this document

1. Summary

1.1 Where the migration stands

The Macnica Americas pages have been migrated to global2 and rebuilt with global2's components; two GWI event pages await a decision (question M6). Their text, images, links, tables, videos and downloads come from the original GWI pages.

99%
of the 1,846 links written in the content of the GWI pages compared on 25 Sep are on the global2 pages with the same destination

10
links, on 6 pages, whose destination on global2 differs from GWI; each is listed in question M4 for your confirmation

0
Image or Text with Image components pointing to a missing file or to a file stored on GWI (checked 25 Sep)

What remains is mainly **layout refinement**: heading levels, spacing and padding, the size of images next to their text, tables, buttons, tabs and lists. These are the topics of Anion's review comments of 21 to 28 September, and most of them concern how the migrated content is laid out. Comments that do not yet name the block or the expected result, including those about content, are listed in question A10, so that each can be acted on precisely.

1.2 Why this document

The same layout topics come up on many pages, and a short comment such as *“Spacing issues”* or *“Padding Issues”* can be met in more than one way. A written target, with measurements and pictures, lets every remaining page be finished and reviewed the same way by everyone. This document proposes that target:

- **Section 3** proposes how a page is reviewed and measured: which view, which window width, what it is compared with.
- **Section 4** proposes 19 guidelines. Each gives a pass criterion, where it comes from and how to check it, and, where a setting is involved, the global2 setting that produces it. Pictures show accepted and not accepted results wherever the wording could be read in more than one way.
- **Section 5** asks the questions where a decision is needed. All but A10 have fixed options and our recommendation, so one letter per question is enough (per part in A2, A5 and A8, per link in M4); A10 is a table to complete.
- **Section 6** is the answer sheet. **Appendix A** is the checklist a reviewer fills in for each page.

What we ask. (1) Answer the questions of Section 5 on the answer sheet in Section 6. (2) Confirm the guidelines, or note what should change. Once they are confirmed, the guidelines become the criteria every page is accepted against, and each review comment points to the guideline it concerns.

2. How a migrated page is built

P1 **Content comes from the original GWI page.** The text, images, links, tables, videos, downloads, page title and page description of a global2 page are those of its GWI page, in the same order. We do not rewrite, add or remove content; the only differences allowed are listed in G1. Any change to the content of a page is a decision for Macnica Americas (question M1).

P2 **Layout follows GWI, adapted to global2.** Each page keeps GWI's arrangement: what sits beside, above or below what. Where GWI's layout cannot be reproduced with global2's components, or where a guideline in Section 4 asks for a different arrangement (for example, an image on the left of its text), the layout differs from GWI and the content stays the same.

P3 **Only global2 components and their settings.** Pages are authored in the AEM author with the components and style options that global2 provides (Appendix C); page authors do not edit HTML or CSS. Each guideline names the settings that meet it. Where a component has a fixed space or size that no setting changes, the guideline's numbers allow for it, or list it under *"Not counted"*.

3. How a page is reviewed

These conditions apply to every review, so that two reviewers looking at the same page reach the same result.

R1 **View the page as visitors see it** (called *"view mode"* in this document): add `?wcmmode=disabled` to the page address, or use *"View as Published"*. Spacing, section links and forms are judged outside the page editor, because the editor adds empty drop zones (about 29px each) that enlarge every gap, section links do not scroll inside it, and form messages appear under the form.

R2 **Desktop:** a page area 1,400px wide at zoom 100% (the browser's responsive mode at 1,400 × 900 gives exactly that). **Phone:** 390 × 844, when the phone view is reviewed (question A9).

R3 **Compare with the original GWI page**, opened the same way, side by side. The GWI page has the same address under `/content/macnicagwi/americas/mai/en`, except that the global2 `/solutions` pages are under `/technology` on GWI, GWI names written with capitals are lowercase on global2, with repeated or trailing hyphens reduced to one, and one page was renamed: `/products/boards-modules/ibase/embedded-computing/ibase-mi991-mini-itx-motherboard-for-sale` is `…/embedded-computing/mi991` on GWI. global2 pages use the full window width, so they are wider than GWI by design: compare content and arrangement, not width.

R4 **Open every tab** on both pages. Each tab is reviewed as a separate part of the page.

R5 **The site header, navigation, breadcrumb, footer and the buttons fixed to the window** (such as *"Page Top"*) belong to the site template, not to the page. They are not part of page acceptance: nothing inside them, including their headings and their width, counts for or against a page.

R6 **We ask that each review comment name** the page, the block (its title or first words), the guideline it does not meet (for example *"G8"*), and the expected result (question J1).

R7 **Measuring.** Values are CSS pixels, read with the browser's own inspector (right-click, *"Inspect"*) or on a screenshot taken in responsive mode at a device pixel ratio of 1. A space is measured from the lowest visible pixel of the upper block (the bottom of its letters, image, table or button) to the highest visible pixel of the lower block. A **block** is one component as it appears on the page: a title, a text, an image, a Text with Image, a table, a row of buttons, a video or a list. A grey band edge ends a space: the grey side is judged by G9 (30 to 60px), and the white side by G8. A **top-level section** is a Container placed directly in the page content, not inside another container (on a page with Sticky Tabs, the sections inside the Sticky Tabs container). Scroll to the bottom of the page once before measuring, so that every image and video has loaded. A value within 2px of a limit passes.

4. Page acceptance guidelines

Each guideline gives the criterion a page must meet (**Pass when**), how a reviewer checks it, the global2 setting that produces it, and where it comes from. Pictures show accepted and not accepted results wherever words alone could be read in more than one way. All measurements follow R7 (view mode, 1,400px page area).

Migration principle marks a guideline that follows from Section 2. From review marks a guideline that restates what Anion's review comments ask for. Proposed marks a measurement or a choice that we propose and ask you to confirm (Section 6).

A. Content

G1 Content matches the original GWI page

Migration principle · question M1

Pass when

- Every text block, image, link, table, video and download shown on the GWI page is on the global2 page, with the same words, and the blocks are in the same order.
- Nothing that GWI does not show is added, except the differences listed below.
- The page title and page description in the page properties are those of the GWI page.
- On a page with tabs, each tab holds what the matching GWI tab holds.

Allowed differences

- Changes that another guideline requires, with the words, images and links of each block unchanged: an image placed on the left of its text (G10) or beside it (G11), a video paired with its text (G12), heading levels (G5), end-of-page contact buttons shown through the Experience Fragment with the same labels and links (G14).
- Empty lines that GWI uses only as spacing are removed. A GWI download box becomes a download button with GWI's label (G4). An in-page menu that only links to an event's website becomes a button with GWI's text and address.
- Links decided in question M4.
- Image and Title links open in the same tab: the author dialog of these components offers no *"open in a new tab"* option.

How to check

Open both pages (R1, R3) and read them block by block; open every tab on both (R4).

Basis	The migration principle (Section 2, P1). Anion's comments about content are listed in question A10, with the other comments that need a block named, so that each block can be compared with its GWI page.

G2 Links

Migration principle

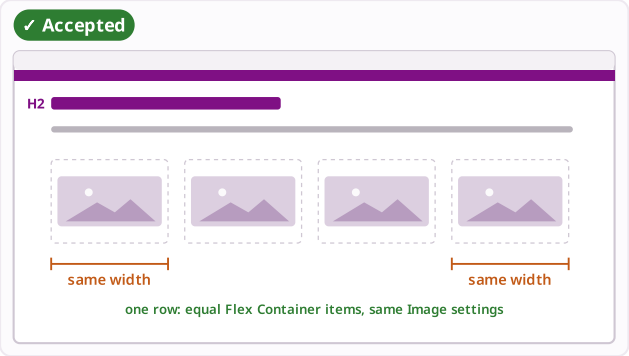

Pass when	• Every link has the same destination as on GWI, except the links decided in question M4. Links to other Macnica Americas pages open the global2 page. • Every link opens without an error when clicked in view mode. • A link in a Text, Button or Text with Image opens in a new tab only where GWI opens it in a new tab. • No link is written with a full author address (`https://author-…adobeaemcloud.com/…`) or with `editor.html`, and none points to a GWI page (`/content/macnicagwi`) or to a file stored on GWI. While pages are reviewed on the author, internal links open on the author: that is expected.
Not counted	A link to a Macnica page that is outside this migration and not yet on global2: it is kept as on GWI.
How to check	Click each link in view mode and compare its destination with the same link on GWI.
In global2	The link field of Text, Title, Button, Image and Text with Image. Text, Button and Text with Image links have an *"open in a new tab"* option.
Basis	The migration principle (Section 2, P1): every link as on GWI, pointing to the global2 page.

G3 Images

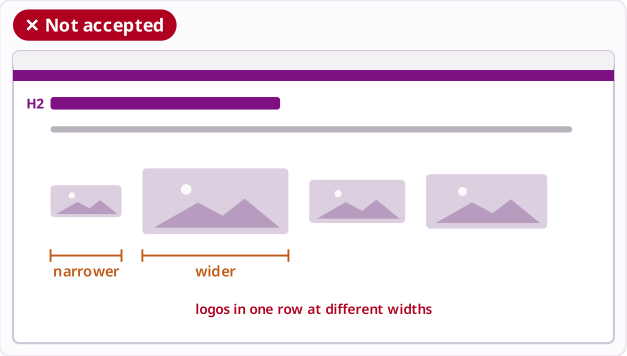

From review · limits proposed

Pass when	• Every image loads, shows the whole picture (nothing cut off) and is stored in the global2 asset library (DAM), not on GWI. • An image is never shown wider than its file, except an image that fills the content width under G11 or an image in a row or grid under the next point, each enlarged at most 1.5 times its file width. • Images side by side in one row or grid have the same displayed width: each uses *"Size: Expand to Fit Width"* in equal Flex Container items. Where a file would have to be enlarged more than 1.5 times, the images are shown at their file widths, centred in equal columns. Heights match only when the files have the same proportions. • The alternative text is the GWI image's alternative text. Where GWI has none: as decided in question M3.

Not counted	Card List images, which the Card List always crops to a 2:1 frame (G16).
How to check	View mode. Right-click the image, *"Inspect"*: the browser shows its displayed size and the file's own size. In the author, the image's *"Alternative Text"* field, with *"Get alternative text from DAM"* unchecked so that the page's own text is used.
In global2	Image and Text with Image components. Images in a row: equal Flex Container items with the same Image settings. The Image style *"Size: Expand to Fit Width"* only where G11 applies.
Basis	Anion, 23 Sep: *"Images are bigger in size, no alignment"* (IBASE IB836, EC-7100; IEI AFL3-W19C-ULT5, FLEX AIoT Developer Kit Gen II, KINO-DH420).

Images side by side in one row have the same displayed width.

Images in one row shown at different widths.

Figure 1. Images in a row (G3).

G4 Downloads

From review

Pass when	• Each downloadable document shows its title: either the button or link text names the document, or the document's title is the line directly above the button (G14). • A single-file download is a download button placed as described in G14. • Files are stored in the global2 asset library (DAM).
How to check	View mode: read the label of each download, or the line directly above it.
In global2	A Button linked to a file takes the download style by itself. A table of document names and links. The Download List component for a folder of documents, only where the files' titles in the DAM match GWI's labels.
Basis	Anion, 23 Sep: *"PDF titles missing"*; 28 Sep: *"Missing titles for pdfs"* (NVIDIA Jetson AGX Xavier). Download buttons: see G14.

B. Page structure

G5 Headings

From review · levels in question A2

Pass when

- The page has exactly one H1: the page title, at the top of the content.
- A title that sits directly in a top-level section is an H2. A title inside a card, a Flex Container item or a tab panel under an H2, or a title that follows an H2 in the same section and introduces part of its content, is an H3; below that, H4. A tab-panel title is one level below the nearest heading above the tab bar. A section title stays an H2 when it sits in a Flex Container item beside a video (G12) or opens a Text with Image (question A3).
- No level is skipped going down: H1 directly followed by H3 fails.
- A section title is always a heading. A paragraph whose whole text is bold, stands on its own line and introduces the text below it is a title, and it is formatted as a heading.
- No empty headings.

Not counted

Headings in the site header and footer (R5).

How to check

In the author: the heading level set on each Title component (a Title whose level was never set is an H1), and the paragraph format (Heading 2, Heading 3…) of headings typed inside Text or Text with Image. In view mode, right-click a title, *"Inspect"*: the tag shows its level (h1, h2…).

In global2

Title component (heading level H1 to H6); paragraph formats Heading 1 to Heading 6 in Text and Text with Image. Our reading of the review comment and the size of headings: question A2. A title placed beside an image: question A3.

Basis

Anion, 27 Sep: *"Subtitles should not be H1. Only main title should be H1."* (MB991). Anion, 28 Sep: *"only main title should be h1/h2, remaining titles should not be h1"* (Hitek pages, news items, IEI Embedded Systems, IBASE MB995, SiTime Clock Buffers, Japan Innovation Showcase, Contact download page, error page); *"Titles are kept as para"* (IBASE IB836); *"Title issue"* (EC-7100, AFL3-W19C-ULT5).

One H1 (the page title), H2 for each section, H3 inside a section.

Several H1s, a section title typed as bold text, and a skipped level.

Figure 2. Heading hierarchy.

G6 Text formatting

From review

Pass when

- Body text uses the default paragraph format. No body text is enlarged or reduced with the Text *"Font Size"* styles (the size of titles: question A2).
- Bold, italic and lists are as on GWI.
- Lines that GWI shows with no blank space between them (an address, a phone and e-mail block) are one paragraph with line breaks. Lines that GWI separates with a blank space are separate paragraphs.
- No empty paragraph between a title and its text, or between two paragraphs.

How to check

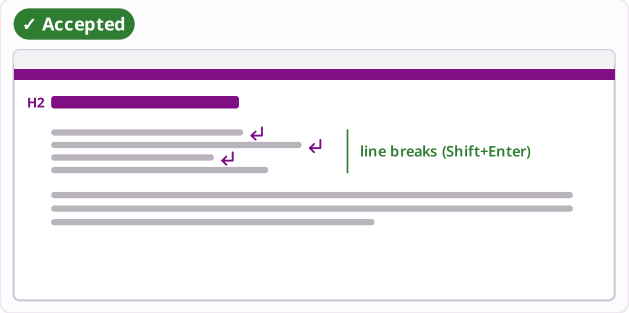

View mode, side by side with GWI. In the author's text editor, Shift+Enter makes a line break (lines 30px apart); Enter starts a new paragraph (a paragraph gap is added).

In global2

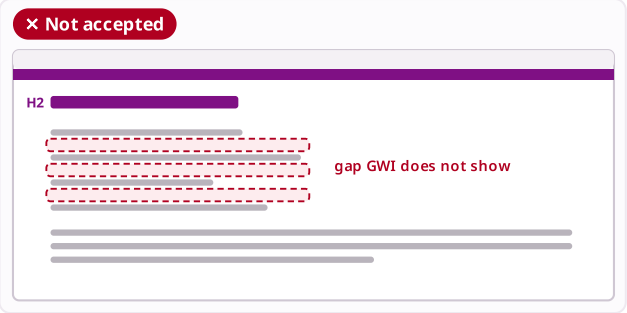

Text and Text with Image editors: paragraph format *"Paragraph"*; Shift+Enter for a line break.

Basis

Anion, 27 Sep: *"there's gap between title and description. Press Shift+Enter after Title to avoid space."* (MB991); *"Fonts are not consistent"* (Terms & Conditions); *"Spaces"* (Tariff Pass-Through Policy Notification). Anion, 28 Sep: *"Spaces at content in paragraphs"* (FLEX AIoT Developer Kit Gen II).

Lines that GWI shows with no space between them (an address, a contact block) are one paragraph with line breaks.

The same lines typed as separate paragraphs: a paragraph gap appears that GWI does not show.

Figure 3. Lines that GWI shows together (address, phone and e-mail).

G7 Page width and side padding

Proposed · question A1

Pass when

- Content uses the full window width; no section uses the fixed 1,000px column.
- Every top-level section has the left and right padding decided in question A1. **Recommended:** 50px each side (*"Padding - Left/Right: Large"*), which leaves the content 1,300px wide in a 1,400px page area.
- No text, image or table touches the window edge.

Not counted

Content inside the end-of-page contact Experience Fragment, which brings its own padding and starts 25px further in.

How to check

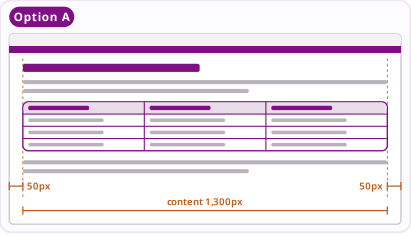

View mode: the text, images and tables of every section start and end at the chosen distance from the window edges (measure the content, not the grey band).

In global2

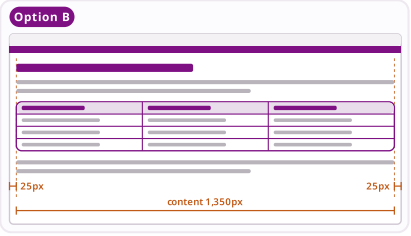

Container style *"Padding - Left/Right"* on each top-level section: Large 50px, Medium (the default) 25px, Small 15px, No Padding 0. Tab panels and containers nested inside a section use *"No Padding"*, so the section's padding applies once. The *"1000px"* width style is not used.

Basis

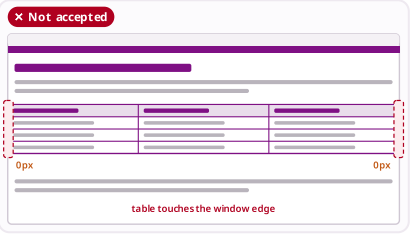

Anion, 27 Sep: *"Need to give Padding Left/Right for all Altera, Anlog, microchip, on-semiconductor, sitime pages"*. Anion, 28 Sep: *"L/R Padding - should be large"* (Smart City & Mobility, Terasic Apollo S10 SOM, Transcend).

Container Padding Left/Right: Large — 50px each side; content 1,300px wide in a 1,400px page area (R2).

Default padding (Medium) — 25px each side; content 1,350px wide.

Content touching the window edge (no padding) is never accepted.

Figure 4. Side padding: the space between the content and the edge of the window (question A1).

G8 Vertical spacing

Proposed · numbers to confirm

Pass when

- Title to the first line of its text, with no empty line between them: **45px or less** when a Title component is followed by a Text; **70px or less** when the text is in a Text with Image, either typed as its first line or placed below a Title component (the Text with Image adds 30px above itself, and the editor adds a paragraph gap after a heading).
- Paragraph to paragraph: the standard paragraph gap only (30px between line boxes). No empty paragraphs used as spacers.
- Block to next block, inside a section or between sections: **125px or less**.
- Above the end-of-page contact buttons: **150px or less**, because about 90px of that space is part of the Experience Fragment itself.
- Blocks never touch: **at least 20px** between an image, table or button and the next block.
- Bottom of the tab labels to the first line of the tab's content: **60px or less** (G15).

Not counted

The space below a form, which the form component sets.

How to check

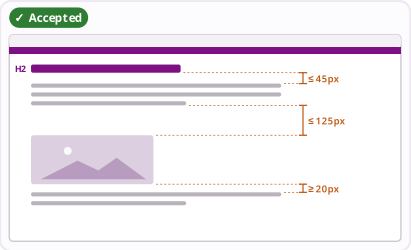

R7, on the whole page in view mode. As a quick reference, lines of body text are 30px apart.

In global2

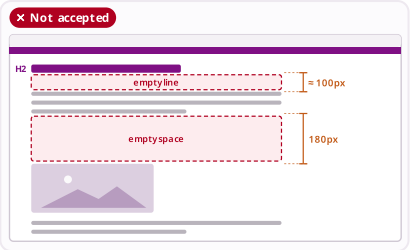

Vertical space comes from Container padding (*"Padding - Top/Bottom"*: Large 70px, Medium (the default) 50px, Small 30px, No Padding 0) plus the fixed spacing of each component (Title: H1 and H2 about 12px above and below, H3 20px below only; Table 20px; Text with Image 30px; Button 40px above it; List 55px; video 24px above it). There is no setting for the space between two components. Two default sections in a row leave 100px between their contents (50px + 50px); where a gap passes 125px, one of the two sections uses Small. An Image and a Button have no space below them: when another block follows, it starts in a new Container with Small.

Basis

Anion, 21 Sep: *"white space"*. Anion, 23 Sep: *"Spacing issues"* (IBASE MB995). Anion, 27 Sep: *"Spacing b/w section to section"*, *"Spacing issue"*. Anion, 28 Sep: *"Spacing in the content"* (Design Services, Broadcast & ProAV), *"Lots of spaces in page for images and content."* (Luminous Comet A65), *"Padding issue for Features section"* (TQMLS1028A).

Title to its text ≤ 45px (Title component); block to block ≤ 125px; blocks never touch (≥ 20px).

Empty line under a Title: about 100px from title to text (limit 45px); 180px of empty space between two blocks.

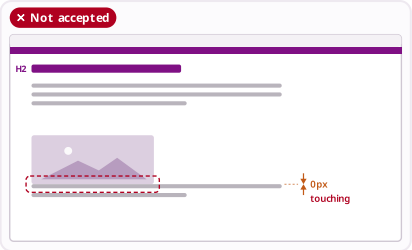

Image touching the next block (0px).

Figure 5. Vertical spacing between headings, text and blocks.

G9 Background bands

Proposed · question A6

Pass when

- The page title and the introduction (everything between the H1 and the first H2) are on white.
- A grey band starts at an H2 and ends before the next white section or before the end-of-page buttons. It holds at least two blocks and is at least 200px tall, from its top grey edge to its bottom grey edge. Which H2 sections are grey is chosen per page.
- Text and images inside a band never touch its edge: 30px to 60px of grey above the first block and below the last.
- Only one grey is used: `rgb(247, 247, 247)`.
- Contact buttons at the end of the page are always on white.
- Pages with no image, video or table (legal notices, policies, glossary) have no grey band, and neither do news, press and event items.
- A page is not rejected for having, or not having, a band when it meets these points.

How to check

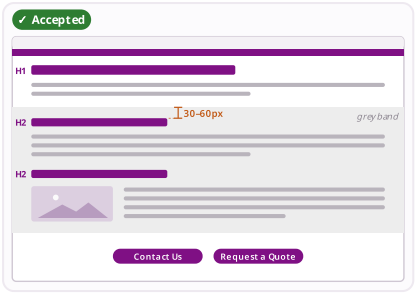

View mode, full page; R7 for the 30px to 60px and the 200px.

In global2

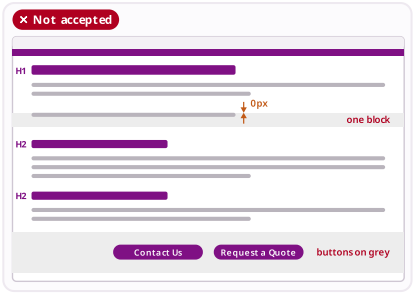

Container background colour on a top-level section, so that it spans the full window width. The grey is typed as `rgb(247,247,247)` (it is not one of the colour picker's swatches). A band section uses *"Padding - Top/Bottom: Small"* (30px); a list at the end of a band goes in its own grey section with *"No Padding"*, because the list adds 55px of its own.

Basis

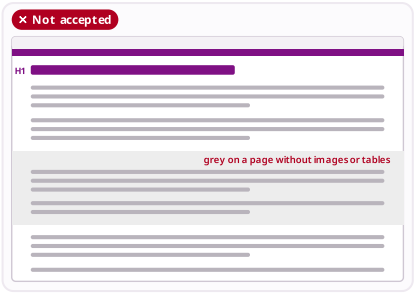

Anion, 27 Sep: *"No need of BG color"* (Tariff Pass-Through Policy Notification, Glossary); *"Adjust BG color"* (eight news items).

White title and introduction; grey band around the main content (two or more blocks, 30–60px inside); contact buttons on white.

A band with one block, under 200px tall; text touching the grey edge (0px); end buttons on grey.

Grey band on a page without images, videos or tables (legal notice, policy, glossary). News, press and event items have no band either.

Figure 6. Background bands: grey around the main content; white for the title, the end buttons, pages without images, videos or tables, and news, press and event items.

C. Components

G10 Image beside its text (Text with Image)

From review · numbers proposed

Pass when

- An image placed beside its text (G11 decides which images) is in one Text with Image, image on the left.
- The empty space between the image and the text is **60px or less**: the component's fixed 40px plus half of any unused part of the image column (the image is centred in its column).
- The image is at most **60px or a quarter of the text's height** taller than the text, whichever is larger. Text height runs from the top of the first line's letters (a heading typed in the text included) to the bottom of the last line's letters.
- Wrap is set when the text would otherwise be taller than the image by more than **120px or half the image's height**, whichever is larger. With Wrap, the two points above do not apply.
- Text with Image blocks that follow each other with only a title between them, or that sit in tabs of the same tab bar, use the same *"Image Width (%)"*.
- The image is never shown wider than its file (G3).
- When these points conflict, they apply in this order: never wider than the file; the 60px space; the same width in a series; the heights. If the text needs Wrap but the file is wider than the width wanted for the image, Wrap is not used and the heights point is not counted.

How to check

View mode, R7. In the author: *"Image Width (%)"* in the Text with Image dialog, and the styles *"Image Position: Left"* and *"Text Wrapping: Wrap"*.

In global2

Text with Image, the component the review comments call *“image with text”*. *“Image Width (%)”* sets the width of the image column; *“Left”* places the image on the left; *“Wrap”* lets the text continue under the image, and the image then keeps its own file width, up to 48% of the block, so Wrap is used only when the file is no wider than the width wanted for the image. The component never enlarges an image: a small file in a wide column leaves empty space, so the width is chosen to fit the file.

Basis

Anion, 22 Sep (Slack): *“Yeah we have to use text wrap if you see lot of white space”*. Anion, 23 Sep: *“Lot of white space around the image – convert them into image with text”*; *“We see images were very big and used flex containers instead of flex conteianer use image with text component.”* (AIoT, Design Services); *“Use image with text component for”* (three Hitek pages; Anion confirmed on 28 Sep: *“mentioned fixes are done”*).

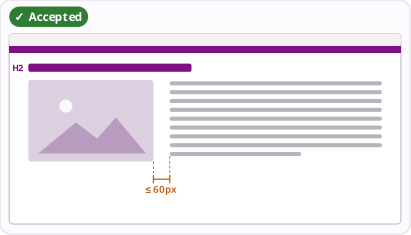

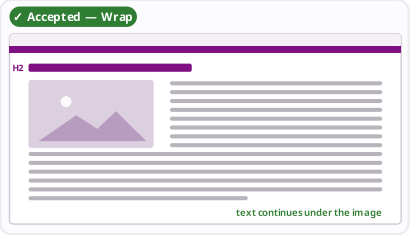

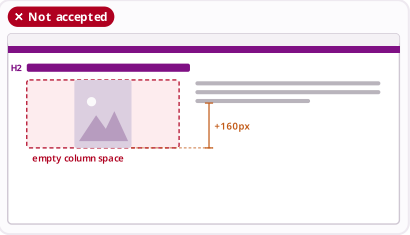

Image on the left fills its column; image to text ≤ 60px; image at most 60px or a quarter of the text height taller than the text, whichever is larger.

Text taller than the image by more than 120px or half the image height, whichever is larger: Wrap, so the text continues under the image.

Small image centred in a wide column (more than 60px to the text); image 160px taller than its text.

Figure 7. Image beside text (Text with Image, image on the left).

G11 Where each image goes

Proposed · question A5

Pass when

Images in a row or grid follow G3: equal Flex Container items, each image centred in its item. Every other image is placed by the first rule that applies:

1. A diagram, chart or screenshot is shown as large as the page allows: at its file width, aligned left with the text of its section, or at the content width if its file is wider. It is not placed in a Text with Image.
2. An image whose file is **at least 900px wide** fills the content width (enlarged at most 1.5 times).
3. An image that GWI shows directly above, below or beside a paragraph of the same section, with no other block between them, sits beside that paragraph in a Text with Image, image on the left (G10).
4. Any other image is shown at its file width, aligned left with the text of its section.

An image is never left alone in the middle of the page with wide empty space on both sides.

How to check

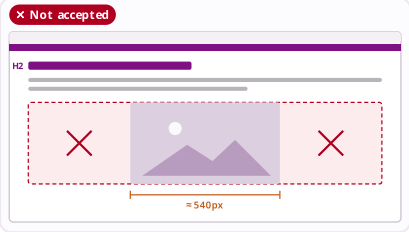

View mode. Right-click the image, *“Inspect”*: the browser shows the file's own width and the displayed width.

In global2

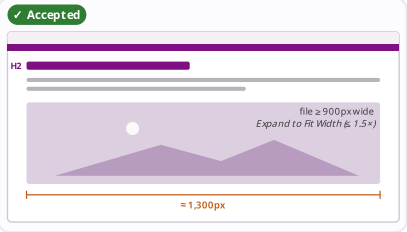

Image style *“Size: Expand to Fit Width”* (fills its column) and *“Display Position: Left”*; Text with Image for rule 3.

Basis

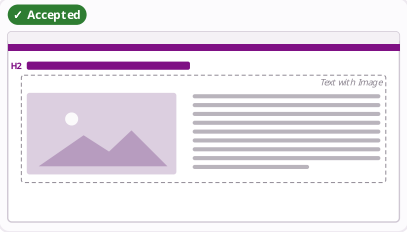

Anion, 28 Sep: *“image component - make image to full width to avoid space left and right”* (Japan Innovation Showcase). Anion, 23 Sep: *“Lot of white space around the image”* (AIoT).

An image narrower than 900px, alone and centred, with wide empty space on both sides.

An image whose file is at least 900px wide fills the content width, enlarged at most 1.5×.

An image that GWI shows next to a paragraph goes beside it (Text with Image, G11 rule 3); without such a paragraph it is shown at its file width, aligned left (rule 4).

Figure 8. Images without text beside them.

G12 Videos

From review · layout proposed

Pass when

- A video never spans the full width. It sits in one of two Flex Container items, side by side, with *“Spacing Between Items: Medium”* (the default). The items are always equal, so the video is 637px wide with side padding Large (A1, option A), or 662px with the default padding.
- The other item holds the title and paragraph that sit directly above, below or beside the video on GWI, with no other block between them: on the side where GWI puts them, or in GWI's reading order when GWI stacks them.
- Where GWI has no text for the video, the other item holds the next video or stays empty, and the video keeps the same width.

How to check

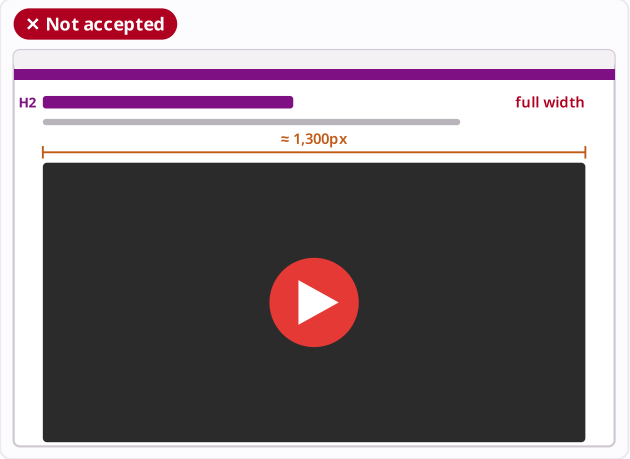

View mode: the video and its text are side by side. Right-click the video, *“Inspect”*: the browser shows its width.

In global2

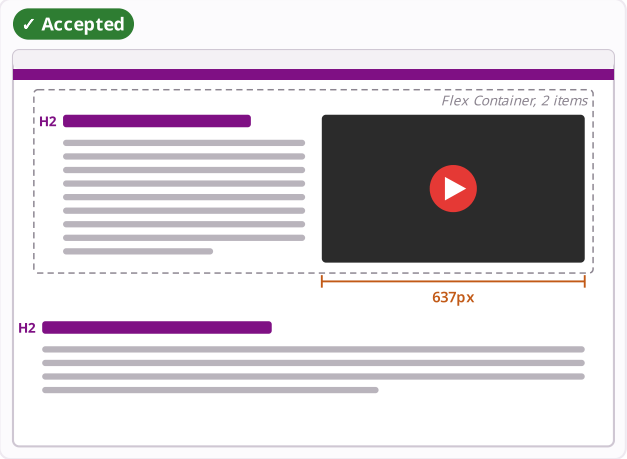

Flex Container with two Flex Container Items; Embed (style *“YouTube”*) in one of them.

Basis

Anion, 23 Sep: *“Youtube video is completely occupied”* (Broadcast & ProAV Solutions).

Video spanning the full width of the page.

Video in one of two equal Flex Container items (637px), beside its text (order as on GWI).

Figure 9. Videos.

G13 Tables

From review · format in question A4

Pass when

- When the first row of a table holds column labels, it is a header row (header cells). Where the GWI table has no row of labels, no header row is added.
- Every table on a page uses the format decided in question A4.
- Tables use the full content width. On phones a table scrolls inside its own box.
- The text in the cells is as on GWI.

How to check

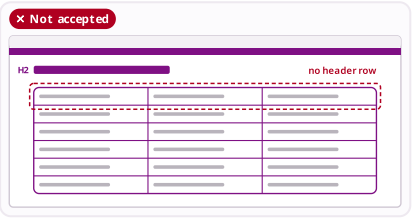

View mode. In the author: the table editor's cell properties (header cell) and the table's Styles.

In global2

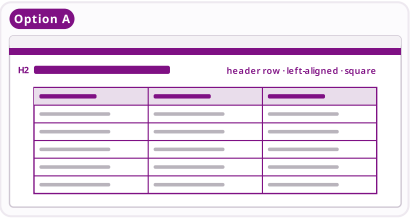

Table component: header cells through cell properties; cell alignment set cell by cell; styles *"No Rounded Corner"*, *"Black"*, *"No Background"*, *"No Frame"*. A table's width and its column widths cannot be set.

Basis

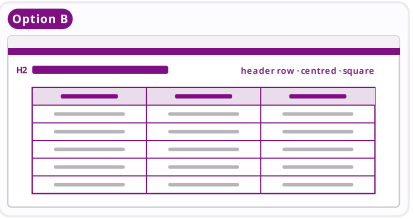

Anion, 28 Sep: *"Tables are not formatted"* (TQMLS1028A), *"table headers issue"* (IEI AFL3-W19C-ULT5), *"table formatting"* (IEI KINO-DH420).

The first row holds column labels but is not a header row: the labels look like data.

Header row; body cells left-aligned; 'No Rounded Corner' style.

Header row; all cells centred; 'No Rounded Corner' style.

Figure 10. Tables: a row of column labels is a header row (G13); the two formats offered in question A4.

G14 Buttons

From review

End of page

- A page ends with contact buttons where its GWI page does (question M2).
- A page that ends with *“Contact Us for More Information”* and *“Request a Quote”* uses the Experience Fragment *“products-contact-block”*; one that ends with *“Sign up”* and *“Contact us”* uses *“signup-and-contact-experience-fragment”*. Any other ending (a single Request a Quote, an event's Register button, a supplier's website) stays as buttons on the page, with GWI's labels.
- End-of-page buttons sit on white; each button of a pair is centred in its half of the row.

Other buttons

- A button is in the same container as the sentence that introduces it, directly below it, with no other block between them. The button's own spacing then applies.
- The buttons of one group are in one container and share one alignment. Two buttons side by side use *“Center”* in each Flex Container item.
- A single *“Request a Quote”* button uses *“Fixed Minimum Width”* and *“Center”*.

Download buttons

- Left-aligned, directly below their title or the line that introduces them, in the same container, with no other block between them; stacked when there are several.
- Never on the same row as another button (a download button is 51px tall, a contact button 57px).

How to check

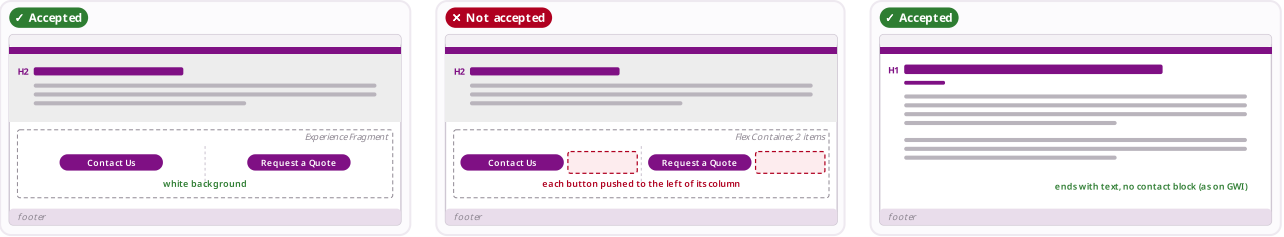

View mode: the background behind the end buttons, their position in the row, and what sits directly above each button. Right-click a button, *“Inspect”*, to see which container holds it.

In global2

Experience Fragment component; the section that holds it uses *“Padding - Top/Bottom: No Padding”*, because the fragment brings its own space. Button styles: *“Width”* (Fixed Minimum Width, Fit to Text) and *“Display Position”* (Center; none means left). *“Right”* is not used for buttons.

Basis

Anion, 28 Sep: *“buttons are not aligned”* (IBASE ET875, ET876, EC-7100; IEI AFL3-W19C-ULT5), *“button alignment issue”* (IEI KINO-DH420); *“download button -align button to left”*, *“add downloads title and button in same container to avoid space”*, *“add 2 buttons and title should be in same container to avoid space”* (news items). Anion, 27 Sep: *“CTAs at bottom not required”*, *“bottom CTAs are not required”* (news items). Anion, 23 Sep: *“CTAs are missing”* (IBASE).

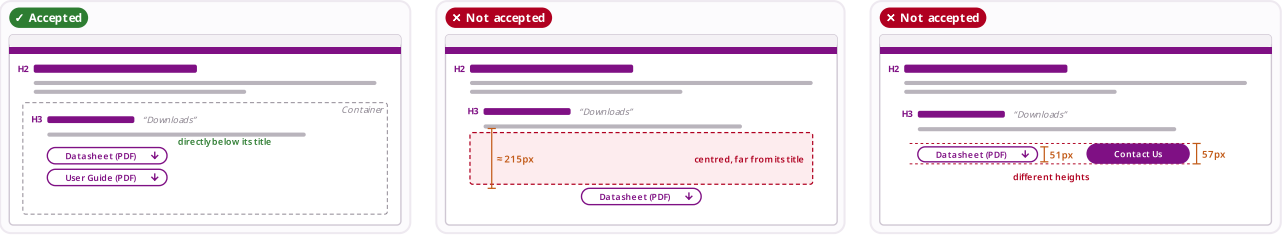

End-of-page contact block (Experience Fragment) on white: both buttons centred in their halves.

Contact buttons placed on the page instead of the Experience Fragment, each pushed to the left of its half instead of centred.

News, press and event items end without the contact block unless GWI has one.

Figure 11. Buttons at the end of the page.

Download buttons left-aligned, stacked, in the same container as their title.

Download button centred and separated from its title.

A download button beside a contact button: different heights, never on one row.

Figure 12. Download buttons.

G15 Tabs and in-page menus

From review · pages in question A7

Pass when

- A page whose GWI version has a menu of links to its own sections uses Sticky Tabs (question A7 sets which pages). Pages that use Tabs (panels) keep Tabs.
- Each Sticky Tabs item, when clicked, scrolls the page to its section.
- From the bottom of the lowest row of tab labels to the first line of content: **60px or less**. Not counted: a List or a Button as the first block of a tab.
- Every tab holds the same content as the matching GWI tab (G1).

How to check

View mode, because section links do not scroll inside the page editor (R1). Click every menu item and every tab.

In global2

Sticky Tabs is placed at the top of the container that holds all the sections it links to, and stays visible while that container is on screen. Each item points to the ID of its section's Title. Tab panels use *"Padding - Top/Bottom: No Padding"* and *"Padding - Left/Right: No Padding"*; the section around the tabs gives the space above and below them and the side padding of G7.

Basis

Anion, 28 Sep: *"Tabs are not visible, tabs should be sticky like in below page."* (Smart City & Mobility, pointing to the Europe Imaging and Vision page); *"Tabs are not visible once clicked they should be sticky."* (Medical & Healthcare Solutions). Anion, 27 Sep: *"Space b/w tabs and content"* (Glossary). Anion, 23 Sep: *"Tabs are not working"* (Smart City & Mobility), *"No Proper alignment of content in tabs"* (Broadcast & ProAV Solutions).

Sticky Tabs stay visible while scrolling; content starts ≤ 60px below the tab labels.

An in-page menu (links to sections of this page) that scrolls out of view; 110px between the tab labels and the content.

Figure 13. Tabs and in-page menus.

G16 Lists of child pages

From review · fields in question A8

Pass when

- About Us, News & Events, and the news, events and newsletter archives list their child pages with a Card List whose source is the child pages. Partner with Macnica: as decided in question A8.3.
- Each card shows the fields chosen in question A8.1. Cards are two per row, in the order the Card List gives.
- Every child page that GWI lists appears, and no other page does.

How to check

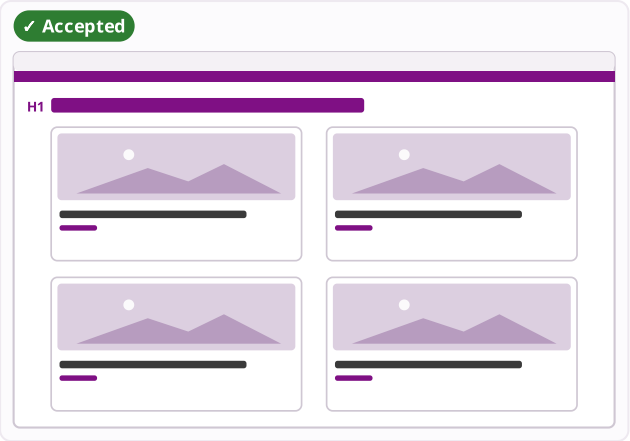

View mode; count the cards against the list on GWI.

In global2

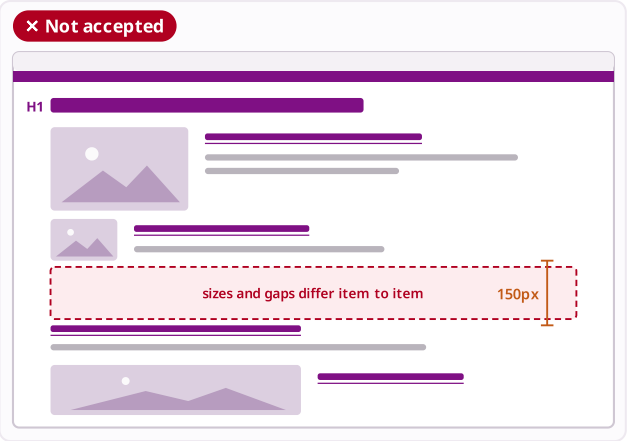

Card List: *“List settings”* set to child pages; *“Item settings”* for the fields shown. A child page appears only when *“Show in lists”* is set in its page properties. A card's image is the child page's featured image, cropped to a 2:1 frame; two cards per row is the component's own layout.

Basis

Anion, 28 Sep: *“add a card list component, and select child pages dropdown under "list settings", select appropriate options which needs to display for the child pages under "item settings""* (About Us, News & Events, Partner with Macnica). Anion, 27 Sep: *“Tags were missed in al news pages. Like “Year”. “ Article date””*.

Card List of child pages, two per row, with the fields chosen in question A8.1 (pictured: a list whose GWI version shows images, so image, title and date).

A list of child pages with different image sizes and uneven gaps.

Figure 14. Lists of child pages.

D. Alignment and page settings

G17 Alignment

Proposed

Pass when

- In each section, titles, text, tables, left-aligned images (Image with *"Display Position: Left"*) and left-aligned buttons start at the same left edge (within 2px).
- Only these are centred: the end-of-page contact buttons, a single Request a Quote button, the buttons of a pair (each in its half), an image inside a Flex Container item, the image of a Text with Image within its column, and the tab labels.
- Blocks side by side (Flex Container items; the image and the text of a Text with Image) start at the same top: the top of the image or video and the top of the text's first line box, as shown by Inspect, are level within 2px. Not counted: the space components add above their content (about 10px above a line of text, about 24px above a heading typed in the text, 24px above a video, 6px above a Wrap image).
- Buttons in one row have their tops on one line (within 2px).

How to check

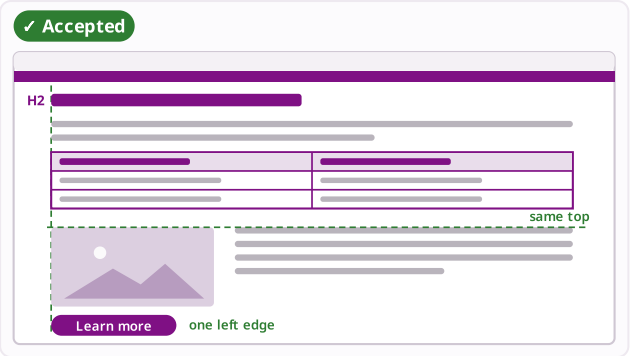

View mode, R7; a vertical or horizontal guide line on a screenshot shows the shared edge.

In global2

One side padding per section (G7), nested containers with *"No Padding"*, Text with Image with the default top alignment, Button and Image *"Display Position"*.

Basis

Anion, 23 Sep: *"Images are bigger in size, no alignment"*, *"CTAs are missing and alignment of image"*, *"No Proper alignment of content in tabs"*, *"No proper alignment of content"*. Anion, 28 Sep: *"no content alignment"*, *"buttons are not aligned"*.

Title, text, table, image and button share one left edge; image and text start at the same top.

Blocks start at different left edges; text beside the image starts lower; a lone button is centred.

Figure 15. Alignment (G17).

G18 Page properties

From review · page names proposed · navigation in question M5

Pass when

- Pages created in the migration have a lowercase name (the last part of the address), with single hyphens between words and no spaces. Existing page names are not changed as part of page acceptance.
- The page title and description are those of the GWI page (G1).
- On product pages, *"Business Categories"* is the product category of the page's address: `/products/boards-modules/…` is Boards and Modules, `/products/semiconductors/…` is Semiconductors.
- The regional tags under *"Product Hierarchy Details"* are the Macnica Americas (MAI) tags.
- News items carry the *"Year"* tag and the article date (question A8.2).
- *"Hide in Navigation"* is set as decided in question M5.

How to check

Page Properties in the author.

In global2

Page Properties: name, title, description, Business Categories, Product Hierarchy Details tags, Year tag and article date, Hide in Navigation.

Basis

Anion, 27 Sep: *"Business categories field should not be empty. It should be Boards and Modules."* (MB991); *"Tags were missed in al news pages"*. Page title and description: P1.

E. Phone view

G19 Phone view

Proposed · question A9

Pass when

- At 390px wide, no block of the page content is wider than the screen. Only tables scroll, inside their own box (every table is at least 655px wide on phones).
- Blocks that sit side by side on desktop stack one under the other; grids of logos or cards may show two per row.
- Images and videos fit the screen width, and no text is cut off or overlapped.

Not counted

The site header and footer (R5). Buttons keep their minimum width of 345px.

How to check

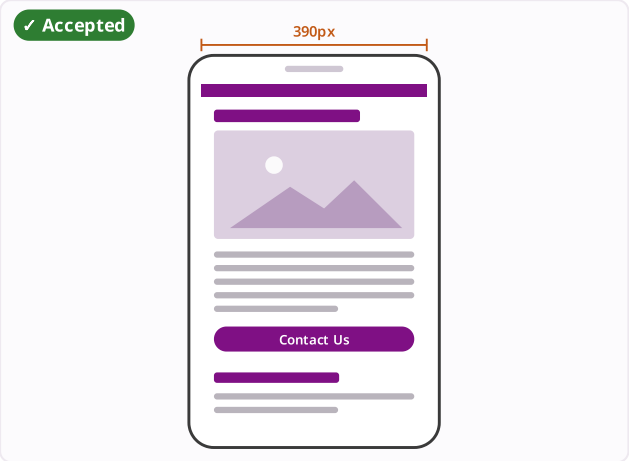

The browser's responsive mode at 390 × 844, in view mode.

In global2

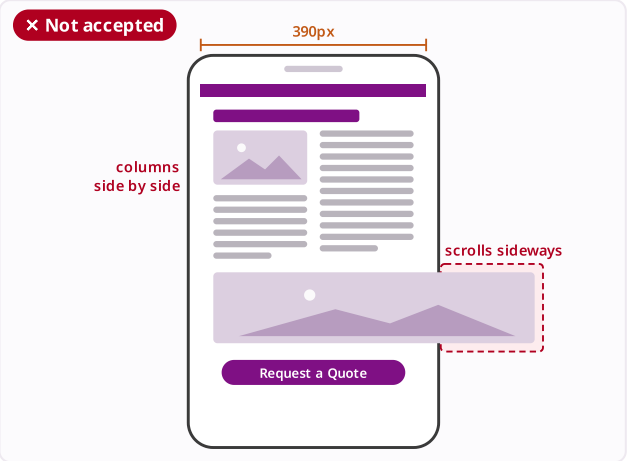

Flex Container style *"Design for SP: 1 Column"* stacks its items on phones (*"2 Columns"* for logo and card grids). Text with Image stacks by itself. Tables scroll inside their box.

Basis

Anion, 21 Sep, on the phone view (quoted in Appendix B).

At 390px, side-by-side blocks stack; images and videos fit the screen.

Columns kept side by side and an image wider than the screen.

Figure 16. Phone view at 390px.

5. Questions

Each question except A10 has a fixed set of options; *"Other"* is answered with a page, or a screenshot, that shows the expected result. Until an answer arrives, we follow the option marked **Recommended** for the layout questions (A1 to A9), so that work on the remaining pages continues; pages finished that way are ready for acceptance under that option, and if a later answer differs they are changed on request. For the content questions (M1 to M6), pages stay as they are today until Macnica Americas answers.

5.1 For Anion: layout

A1 Side padding (G7)

Review of 27 Sep: *"Need to give Padding Left/Right for all Altera, Anlog, microchip, on-semiconductor, sitime pages"*. Review of 28 Sep: *"L/R Padding - should be large"*. The pictures are in Figure 4.

A *"Padding - Left/Right: Large"* (50px each side) on every top-level section of every page. **Recommended**
It is what the review of 28 Sep asks for, it gives every page the same margins, and it keeps the full-width layout.

B The default padding (25px each side) on every section.

C Other: please give the setting and a page that shows it.

Answer: _____

A2 Heading levels and sizes (G5)

Review of 28 Sep: *"only main title should be h1/h2, remaining titles should not be h1"*.

A2.1 We read this comment as follows. Please confirm:

A The page title is the only H1; section titles are H2; titles inside a section are H3. **Recommended**

B The page title is the only H1; every other title is H3 or lower.

C Other: please give a page that shows the expected levels.

A2.2 Sizes. In global2, a title set to H1 displays at 25px, H2 at 29px and H3 at 22px. The options change only how large the headings look, not their levels. Options A and B are pictured in Figure 17.

A The theme sizes on every heading: H1 25px, H2 29px, H3 22px. **Recommended**

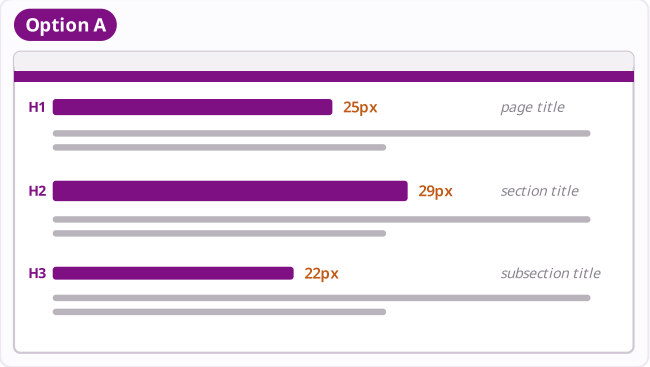

A heading level always looks the same, including headings typed inside text (see A3).

B Title components one size step down with the Title *"Font Size"* style: H2 at 22px, H3 at 18px.

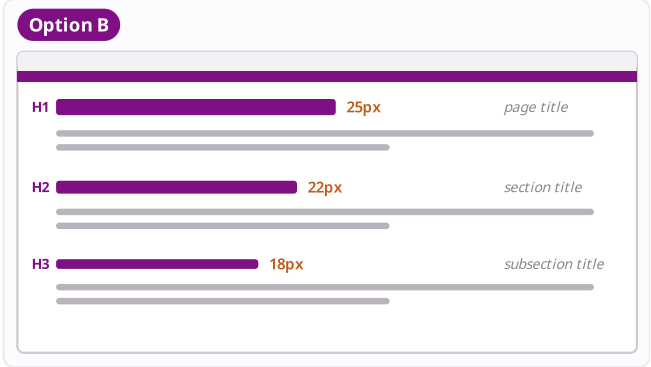

C Section titles the same size as the page title: H2 at 25px, H3 at 22px (Title *"Font Size"*).

D Other.

B and C apply only to Title components; headings typed inside Text with Image keep the theme size. If A3 is answered A, option A here keeps all section titles the same size.

Theme sizes: section titles (H2, 29px) are larger than the page title (H1, 25px). Works the same for headings typed inside text.

Title components set one size step down: H2 22px, H3 18px. Headings inside Text with Image cannot take this setting.

Figure 17. Heading sizes (question A2).

Answer A2.1: _____ A2.2: _____

A3 A section title next to an image (G5, G10)

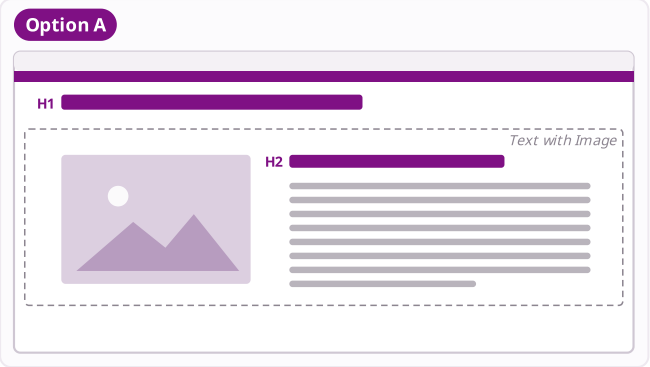

Many GWI sections open with a title, an image and a paragraph. Review comments: *"Titles are kept as para"* (IBASE IB836, 28 Sep); *"there's gap between title and description. Press Shift+Enter after Title to avoid space."* (MB991, 27 Sep). Under option A the title is a real Heading 2, not a paragraph; its text starts in the next paragraph, about 60px below it (allowed by G8). A line break after a heading would make the description part of the heading, so line breaks are used only inside paragraphs (G6).

A The section title may be the first line of the Text with Image text, formatted as Heading 2, so that it sits beside the image. **Recommended**

Title, text and image stay together without an extra gap.

B Every section title is a separate Title component above the Text with Image (the image and text then start about 55 to 65px below the title, allowed by G8).

C Other: please give a page that shows the expected result.

The section title is the first line of the Text with Image text, beside the image.

The section title is a separate Title component above the image and text.

Figure 18. Where the section title goes with an image beside text (question A3).

Answer: _____

A4 Table format (G13)

Review of 28 Sep: *"Tables are not formatted"*, *"table headers issue"*, *"table formatting"*. The pictures are in Figure 10.

A Header row; body cells left-aligned; style *"No Rounded Corner"*. **Recommended**
Long specification values read best left-aligned, and square corners match the other blocks on the page.

B Header row; all cells centred; style *"No Rounded Corner"*.

C Other: please name a page whose tables show the target format.

Answer: _____

A5 Images without text beside them (G11)

Review of 28 Sep: *"make image to full width to avoid space left and right"* (Japan Innovation Showcase). An image enlarged far beyond its file looks blurred, so the choice depends on the file's width. The pictures are in Figure 8.

A5.1 Placement:

A As in G11: a diagram, chart or screenshot at its file width (content width if wider); a file at least 900px wide fills the content width (enlarged at most 1.5 times); an image next to a paragraph on GWI goes beside it; any other image is shown at its file width, aligned left with the text. **Recommended**
No blurred images and no image left alone in the middle of the page.

B Every image without text beside it fills the content width, whatever the size of its file.

C Other.

A5.2 *"Full width"* for an image means:

A The content width (1,300px with A1 option A): the image has the same left and right edges as the text. **Recommended**

B The window width, edge to edge, for an image that is the first block under the page title; every other image as in option A.

Answer A5.1: _____ A5.2: _____

A6 Grey bands (G9)

Review of 27 Sep: *"No need of BG color"* on Tariff Pass-Through Policy Notification and Glossary, and *"Adjust BG color"* on eight news items. We read *"Adjust BG color"* on those news items as *"remove the grey band"*. The pictures are in Figure 6.

A As written in G9: bands group the main sections of a page; no band on pages without images, videos or tables, or on news, press and event items. **Recommended**
It follows both comments of 27 Sep and gives every page type one rule.

B No grey bands on any page.

C Alternate white and grey on every section of every page.

D Other: please name a page that shows the expected bands.

Answer: _____

A7 Pages that get Sticky Tabs (G15)

Review of 28 Sep: *"Tabs are not visible, tabs should be sticky like in below page."* (Smart City & Mobility, pointing to the Europe Imaging and Vision page); *"Tabs are not visible once clicked they should be sticky."* (Medical & Healthcare Solutions). This question covers menus of links to sections of the same page; pages that use Tabs (panels) keep Tabs.

A Every page whose GWI version has a menu of links to its own sections. **Recommended**
Pages of the same kind get the same navigation.

B Only the pages under `/solutions`.

C Only the two pages named in the review.

Answer: _____

A8 Lists of child pages (G16, G18)

Review of 28 Sep: *"select appropriate options which needs to display for the child pages under "item settings""*; 27 Sep: *"Tags were missed in al news pages. Like "Year". " Article date""*. A card's image is the child page's featured image, cropped to a 2:1 frame.

A8.1 Card fields:

A News, events and newsletters: title and date. About Us: title and description. An image only where GWI's list shows one. **Recommended**
The cards show what GWI's lists show.

B Image, title, description and date on every list.

C Title and date only.

D Other: please name a page that shows the expected cards.

A8.2 Every news item gets the *"Year"* tag and the article date, both taken from the GWI article, so that the lists can show dates:

A Yes. **Recommended**

B No.

A8.3 Partner with Macnica. On GWI it is a grid of partner logos. A Card List shows each child page as a card with a cropped image, not a logo grid.

A Keep GWI's grid of partner logos, built with global2 components (four per row, logos the same width, each linked to its page). **Recommended**
Visitors keep the logo wall they know.

B A Card List of the child pages, as in the review of 28 Sep.

Answer A8.1: _____ A8.2: _____ A8.3: _____

A9 Phone view in acceptance (G19)

Review of 21 Sep, on the phone view (quoted in Appendix B).

A The phone view is part of page acceptance, with the G19 criteria at 390px.

B Pages are accepted at 1,400px. The phone view is checked against G19 in a separate pass once a page is accepted on desktop. **Recommended**
The layout decisions in this document are made and measured on desktop; the phone pass then applies one rule (G19) to every accepted page.

Answer: _____

A10 Where each comment applies

To act on these comments precisely, please give for each one the block (its title or first words), the guideline it concerns, and the expected result as a number or a position (for example *"G8: gap between the Features title and its text 45px or less"*, or *"image left of the text"*), or attach a screenshot with the expected result marked. Where a comment concerns content, the block is then compared with its GWI page.

Page	Comment (date)	Block	Guideline and expected result
TQMLS1028A	*"content missing at bottom"* (28 Sep)		
TQMLS1028A	*"Padding issue for Features section"* (28 Sep)		
TQMLS1028A	*"Content duplicate"* (21 Sep, if still present on the current page)		
IBASE ET875, ET876; TQMLS1028A	*"Multiple titles and content"* (23 Sep)		
IBASE ET875 and ET876	*"Title mismatch"* (28 Sep)		
IBASE IB836	*"content is placed at mismatched places"* (28 Sep)		
IBASE (supplier page)	*"alignment of image"* (23 Sep)		
Medical & Healthcare Solutions	*"Content miss matching"* (28 Sep)		
Smart City & Mobility	*"Tabs are not visible"* (28 Sep). The page already uses Sticky Tabs, the component of the Europe Imaging and Vision page: what should look or behave differently?		
Our Global Solutions Company Office Locations	*"Content mismatch"* (27 Sep)		
Terms & Conditions	*"Fonts are not consistent"* (27 Sep)		
Macnica Announces Production-Ready ME10 SoC for Embedded Devices	*"Sub title missing"* (27 Sep)		
Toppan ToF Cameras and Modules; MEP100 SmartNIC at IBC2025	*"Sub titles authored at bottom"* (27 Sep)		
Broadcast & ProAV Solutions	*"No Proper alignment of content in tabs"* (23 Sep); *"no content alignment"* (28 Sep)		
Luminous Comet A65; Medical & Healthcare Solutions	*"No proper alignment of content"* (23 Sep)		

5.2 For Anion and Macnica Americas: how review works

If the two answers to a question differ, Macnica Americas' answer applies.

J1 Format of review comments

A Each comment names the page, the block (title or first words), the guideline it does not meet (G1 to G19) and the expected result. A comment that no guideline covers is marked *"new guideline"*; once agreed, it is added to this document and applies to the pages not yet accepted (J2). **Recommended**

B Other.

Answer: _____

J2 Accepted pages and later changes

A A page that meets every guideline is ready for acceptance (J3). Once it is accepted, a guideline added or changed later applies only to pages not yet accepted; accepted pages are changed only on request. **Recommended**

B Accepted pages are reviewed again after every change to the guidelines.

Answer: _____

J3 Who accepts each page

A Anion's review.

B Macnica Americas.

C Anion reviews each page against this document; Macnica Americas gives the final acceptance. **Recommended**

Anion checks each page against the agreed guidelines, and the site owner makes the final decision.

Answer: _____

J4 The reference for a page's layout

Review of 23 Sep: *"Compare both MAI and MAE"* (the Americas and the Europe pages).

A The reference is the page's GWI arrangement, adapted to global2 as described in Section 2 and the guidelines of this document. A Europe page is an example only where a guideline or an answer names it. **Recommended**

Each Americas page has one reference, its own GWI page, so reviewers judge it the same way.

B The matching Europe page.

C Other.

Answer: _____

J5 Pages whose last review raised only headings

On 28 Sep the review of these pages raised only the heading rule: the three Hitek pages (*"mentioned fixes are done"*), IEI Embedded Systems, IBASE MB995, SiTime Clock Buffers, the Contact download page, the error page, and Japan Innovation Showcase (headings and the full-width image).

A Once they meet G5 (and G11 for Japan Innovation Showcase), they are ready for acceptance without a new full review. **Recommended**

B They are reviewed again in full.

Answer: _____

5.3 For Macnica Americas: content

M1 Content from GWI (G1)

A Confirmed: text, images, links, tables, videos, downloads, page titles and descriptions are migrated as on GWI, with only the differences listed in G1. Content changes are requested separately and are not part of page acceptance. **Recommended**

B Other: please list the content changes that must be part of the migration.

Answer: _____

M2 Which pages end with contact buttons (G14)

Review of 23 Sep: *"CTAs are missing"* (IBASE); review of 27 Sep: *"CTAs at bottom not required"* (news items). On GWI, news, press and event pages end without a Contact / Request a Quote pair; most newsletter issues end with a single Request a Quote button, and the others end as their GWI pages do.

A Every page ends as its GWI page does: the contact pair only where GWI shows it, a single Request a Quote only where GWI shows one, and no end buttons where GWI has none (news, press and event items included). **Recommended**

It matches GWI and the review of 27 Sep.

B The Contact / Request a Quote pair at the end of every page.

Answer: _____

M3 Alternative text where GWI has none (G3)

Alternative text describes an image to screen readers and search engines; it is not shown on the page. Where the GWI image has one, global2 uses it (G3).

A Mark these images as decorative (no alternative text), as on GWI.

B A short alternative text taken from words already on the page: the heading of the block the image belongs to, else the nearest title above it, else the page title. **Recommended**

Every image then has a text alternative, using only words that are already on the page.

C Macnica Americas supplies the texts.

Answer: _____

M4 Links whose destination needs your confirmation (G2)

On these pages, a GWI link has a different destination, or no link, on global2 (compared 25 Sep). The other differences found that day come from how global2 builds the same link (a list, a shared block, or a page's new name) and need no decision. For each row, please choose: **A** keep GWI's destination; **B** use the proposed destination (what global2 opens today); **C** no link, keep the text or image.

Page	Link	On GWI it opens	global2 today (proposed)	Recommended	Answer
Macnica Demonstrates Video Transport Over IP Interoperability at VidTrans16 (news, Feb 2016)	*"www.macnica-na.com"*	The Macnica Asia-Pacific site, in Chinese	The Macnica Americas home page	B	
Macnica Americas Expands Value-added Services for Displays (news, Feb 2018)	The value-added services address	A page that does not exist on GWI	The Displays page	B	

iENSO to Showcase Generative AI at the Edge, CES 2025 (news)	*"submit your request here"*	A page in a test folder (`/test-folder/CES-2025`)	The Contact Us form	B	
Macnica Americas Introduces 100 Gbps MEP100 SmartNIC with Mac Compatibility (news)	The MEP100 address	An address that returns an error	The MEP100 page on global2	B	
Terasic Apollo S10 SOM	Five product images, each a link	Image files on the retired site www2.macnica.com	The images, without a link	C	
Error page	A second *"RETURN TO HOMEPAGE"* link	A Macnica Asia-Pacific site	Not shown; the page's own return link opens the Americas home page	C	

Recommended: B where global2 opens a current Macnica Americas page, C where the GWI destination is on a retired site or on another region's site. Visitors never reach a dead address, and each case is approved once, here.

M5 Which pages appear in the site menus (G18)

Each page has a *"Hide in Navigation"* setting that decides whether it appears in the site menus. This question sets one rule for every page.

A The setting of the GWI page, except individual news, newsletter and event items, which are hidden. **Recommended**

The menus follow GWI's settings; individual news, newsletter and event items are not listed.

B Hidden on every page that has no child pages; shown on every page that has child pages.

C Hidden on every page.

Answer: _____

M6 Two GWI event pages not yet on global2 (G1)

GWI publishes two event pages that are not on global2: *"Altera Sales Conference - 2026"*, and an *"Infocomm 2019"* page dated 13 June 2019 (the *"Infocomm 2019"* page dated 12 June 2019 is migrated).

A Migrate both, as on GWI. **Recommended**

The events archive then lists the same pages as on GWI (G16).

B Leave them out.

C Other: please say which one to migrate.

Answer: _____

6. Answer sheet

Reply with this page, or with one line per question in an e-mail (for example *"A1: A, A2.1: A, …"*).

#	Question	Options	Recommended	Answer	Answered by, date
A1	Side padding	A Large everywhere · B Default 25px everywhere · C Other	A		
A2.1	Heading levels	A H1 page title, H2 sections, H3 inside · B H1 page title, others H3 or lower · C Other	A		
A2.2	Heading sizes	A Theme sizes · B One step down · C Sections 25px · D Other	A

M3	Alternative text where GWI has none	A Decorative · B From words on the page · C You supply	B		
M4	Links whose destination needs confirmation	One answer per row (table in question M4)	B or C, per row		
M5	Which pages appear in the site menus	A As on GWI; individual news, newsletter and event items hidden · B Hide pages without child pages · C Hide all	A		
M6	Two GWI event pages not yet on global2	A Migrate both · B Leave them out · C Other	A		

Guidelines to confirm

Mark each item as confirmed, or note what should change. Numbers in a guideline (for example 45px, 125px, 60px) are part of what is being confirmed.

Item	Confirmed	Change requested
Section 2: How a migrated page is built (P1 to P3)	☐	
Section 3: How a page is reviewed (R1 to R7)	☐	
G1 Content matches the original GWI page	☐	
G2 Links	☐	
G3 Images	☐	
G4 Downloads	☐	

G5 Headings	☐	
G6 Text formatting	☐	
G7 Page width and side padding	☐	
G8 Vertical spacing	☐	
G9 Background bands	☐	
G10 Image beside its text	☐	
G11 Where each image goes	☐	
G12 Videos	☐	
G13 Tables	☐	
G14 Buttons	☐	
G15 Tabs and in-page menus	☐	
G16 Lists of child pages	☐	
G17 Alignment	☐	
G18 Page properties	☐	
G19 Phone view	☐	

Appendix A. Reviewer checklist

One checklist per page. Review conditions: Section 3 (view mode, 1,400px page area, GWI page side by side, every tab opened, measured as in R7). A page is ready for acceptance when every applicable line passes.

Page (global2 address)				
Original GWI page				
Reviewer, date				
#	**Check**	**Pass**	**Fail**	**N/A**
G1	Same blocks as GWI, same words, same order; each tab as on GWI; page title and description from GWI; only the differences listed in G1	☐	☐	☐
G2	Every link opens, with GWI's destination (or as decided in M4); new tab only where GWI has it; no full author address, no GWI page or file	☐	☐	☐
G3	Images load, uncut, from the global2 DAM; never wider than the file (except G11 and rows, at most 1.5×); same width within a row or grid; alternative text	☐	☐	☐
G4	Each download shows the document's title (in its label or on the line directly above); files in the global2 DAM	☐	☐	☐
G5	One H1 (the page title); sections H2, titles inside sections H3; no skipped level; no bold paragraph used as a title; no empty heading	☐	☐	☐
G6	No Font Size styles in body text; bold, italic and lists as GWI; lines GWI keeps together use line breaks; no empty paragraphs	☐	☐	☐
G7	No 1,000px column; every top-level section has the side padding of A1 (Recommended: 50px); nothing touches the window edge	☐	☐	☐
G8	Title to text ≤ 45px (Title above a Text) or ≤ 70px (Text with Image); block to block ≤ 125px; above the end contact buttons ≤ 150px; blocks never touch (≥ 20px); tab labels to content ≤ 60px; no empty spacer paragraphs	☐	☐	☐
G9	Title and introduction on white; each band starts at an H2, holds ≥ 2 blocks and is ≥ 200px tall; 30 to 60px of grey inside; only rgb(247, 247, 247); end buttons on white; no band on pages without images, videos or tables, or on news, press and event items	☐	☐	☐
G10	Image left of its text; image to text ≤ 60px; image at most max(60px, ¼ of the text height) taller than the text; Wrap when the text is more than max(120px, ½ of the image height) taller; same Image Width (%) in a series	☐	☐	☐
G11	Images in a row or grid as G3; every other image by the first G11 rule that applies: diagrams, charts and screenshots at file width (content width if wider), never in a Text with Image; file ≥ 900px fills the content width; next to a GWI paragraph goes beside it; otherwise file width, aligned left	☐	☐	☐
G12	Video in one of two side-by-side Flex Container items (637px with A1 option A, 662px with the default padding); its GWI text beside it, in GWI's order	☐	☐	☐
G13	A row of labels is a header row; no header row added where GWI has no labels; format of A4; full content width	☐	☐	☐

G14	Page ends as its GWI page does (M2); a Contact / Request a Quote or Sign up / Contact us ending uses its Experience Fragment; end buttons on white, each centred in its half; buttons directly under their sentence, same container; download buttons left, directly under their title, never on a row with another button	☐	☐	☐
G15	Section menu as Sticky Tabs (A7); each item scrolls to its section; tab labels to content ≤ 60px; every tab complete	☐	☐	☐
G16	Card List of child pages; fields as A8.1; same pages as GWI's list; Partner with Macnica as A8.3	☐	☐	☐
G17	One left edge per section (±2px); centred only where G17 allows; side-by-side blocks share their top (±2px, component offsets not counted); buttons in a row share their top	☐	☐	☐
G18	Lowercase, hyphenated name on new pages; Business Categories on product pages; MAI regional tags; Year tag and date on news items; Hide in Navigation as M5	☐	☐	☐
G19	At 390px (only when A9 is answered A; otherwise mark N/A and check in the separate phone pass): no content block wider than the screen; side-by-side blocks stack; images and videos fit; no text cut off	☐	☐	☐

Appendix B. Review comments and where each is addressed

The comments Anion sent on Slack on 21 and 22 September and in the review documents of 23, 27 and 28 September, quoted as written, with the guideline or question that settles each one. The comments of 28 September answer the questions and pages we sent on 24 September.

Date	Page	Comment	Addressed in
21 Sep	Pages reviewed so far	*"We have reviewed a few pages and most of them look good with SEO. Observed few minor errors like spacing and duplicate content, but all the pages are breaking in mobile breakpoints."*	G8, G19, A9, A10
21 Sep	TQMLS1028A	*"Content duplicate, Breaking in mobile breakpoint"*	A10, G19, A9
21 Sep	Single Board Computer MBa93xxLA; STKa93xxLA Evaluation Kit	*"white space, broken in mobile breakpoint"*	G8, G10, G19, A9
22 Sep	Text with Image blocks (answer to our question about empty space under images)	*"Yeah we have to use text wrap if you see lot of white space"*	G10
23 Sep	Smart City & Mobility	*"Tabs are not working"*	G15
23 Sep	IBASE (supplier page)	*"CTAs are missing and alignment of image"*	G14, M2; G17, A10
23 Sep	IBASE ET875, ET876; TQMLS1028A	*"Multiple titles and content"*	G5, A10
23 Sep	IBASE IB836, EC-7100; IEI AFL3-W19C-ULT5, FLEX AIoT Developer Kit Gen II, KINO-DH420	*"Images are bigger in size, no alignment"*	G3, G10, G11, G17
23 Sep	IBASE MB995	*"Spacing issues"*	G8
23 Sep	AIoT	*"Lot of white space around the image – convert them into image with text"*	G10, G11
23 Sep	AIoT; Design Services	*"We see images were very big and used flex containers instead of flex conteianer use image with text component."*	G10, G11
23 Sep	Broadcast & ProAV Solutions	*"Youtube video is completely occupied"*; *"No Proper alignment of content in tabs"*	G12; G15, G17, A10
23 Sep	Luminous Comet A65; Medical & Healthcare Solutions	*"No proper alignment of content"*	G17, A10
23 Sep	NVIDIA Jetson AGX Xavier	*"PDF titles missing"*	G4

23 Sep	Hitek Agilex eSOM7-2F, Agilex HPC SOM, Agilex Compact Embedded SOM	*“Use image with text component for”*	G10; fixes confirmed by Anion on 28 Sep

28 Sep	IEI Embedded Systems; IBASE MB995; SiTime Clock Buffers; Japan Innovation Showcase; Contact (download); Error page	*“Additional issue found - only main title should be h1/h2, remaining titles should not be h1”*	G5, A2, J5
28 Sep	Japan Innovation Showcase	*“image component - make image to full width to avoid space left and right”*	G11, A5, J5

Appendix C. global2 settings used in this document

The settings an author can choose in the AEM author for the components named in this document, with their effect in a 1,400px page area. Answers to Section 5 can refer to these names directly.

Component	Setting (as labelled in the author)	Effect at 1,400px
Container	Padding - Left/Right: Large · Medium (the default) · Small · No Padding	50px · 25px · 15px · 0 on each side
Container	Padding - Top/Bottom: Large · Medium (the default) · Small · No Padding	70px · 50px · 30px · 0, above and below together. Two sections in a row add their paddings.
Container	Background colour	A full-width band when set on a top-level section. Grey to use: rgb(247, 247, 247), typed by hand.
Container	1000px	Limits content to a 1,000px column. Not used on the Americas pages (G7).
Flex Container	Spacing Between Items: Large · Medium (the default) · Small · No Spacing	50px · 26px · 15px · 0. Items always share the width equally.
Flex Container	Design for SP: 1 Column · 2 Columns	Phones only: items stack, or two per row (G19)
Text with Image	Image Width (%)	Width of the image column; the image is never enlarged beyond its file
Text with Image	Image Position: Left · Text Wrapping: Wrap · Vertical Alignment: Center, Bottom	Image on the left; text continues under the image (image at its file width, up to 48% of the block); image and text aligned in the middle or at the bottom (top when not set)
Title	Heading level H1 to H6	Theme sizes: H1 25px, H2 29px, H3 22px, H4 18px. A Title whose level was never set is an H1.
Title	Font Size: Heading 1, 3, 4, 5, 6 (the Heading 2 option is not used)	Changes only the size: 25, 22, 18, 16, 15px (question A2)
Text	Paragraph formats: Paragraph, Heading 1 to 6; Shift+Enter	Body text 15px, lines 30px apart, 30px between paragraphs; Shift+Enter breaks a line without a paragraph gap
Image	Size: Expand to Fit Width · Display Position: Left, Center, Right	Image fills its column (it may be enlarged, see G11); alignment inside its column
Button	Width: Fixed Minimum Width · Fit to Text	At least 345px wide · fits the label (at least 550px on desktop)
Button	Display Position: Center · Right (none: left)	Alignment in its column; a button linked to a file takes the download style
Table	Header cells (cell properties) · No Rounded Corner · Black · No Background · No Frame	Bold, tinted header row; square corners; grey scheme; no header tint; no borders. Always the full width of its column; cell alignment is set cell by cell.
Embed	YouTube	16:9 video filling its column

Tabs, Sticky Tabs	Panels; the Title ID each Sticky Tabs item points to	Sticky Tabs stay visible while their container is on screen (G15)
Card List	List settings: child pages · Item settings: fields shown	Cards of the child pages that have *"Show in lists"* set; two per row (the component's layout); images cropped to 2:1
Experience Fragment	products-contact-block · signup-and-contact-experience-fragment	The shared end-of-page contact blocks (G14)

Settings that meet the numbers in Section 4

To meet	Use
Side padding of A1 option A (G7)	Padding - Left/Right: Large on each top-level section; No Padding on tab panels and nested containers
30 to 60px of grey inside a band (G9)	Padding - Top/Bottom: Small on the band section; a list at the end of a band in its own grey section with No Padding
Block to block ≤ 125px (G8)	Where two default sections meet and the gap passes 125px, Padding - Top/Bottom: Small on one of them
Blocks never touch (G8)	A block that follows an Image or a Button starts in a new Container with Padding - Top/Bottom: Small
Tab bar to content ≤ 60px (G15)	Padding - Top/Bottom: No Padding on the tab panels
Video width (G12)	Flex Container with two items, Spacing Between Items: Medium; Embed style YouTube in one of them
Above the end contact buttons ≤ 150px (G8)	The section that holds the Experience Fragment uses Padding - Top/Bottom: No Padding; the fragment brings its own space
Sticky Tabs pages (G7, G9, G15)	The container that holds the linked sections uses No Padding on all sides; each section inside it takes the side padding of G7 and the band colour of G9
Phone stacking (G19)	Design for SP: 1 Column on every Flex Container (2 Columns for logo and card grids)

Fixed by the components, and already allowed for in the numbers: the 40px above every button (30px above a download button); a Title's own padding (H1 and H2 about 12px above and below; H3 20px below); the 30px above and below a Text with Image; the 24px above a video; the 43px above and 24px below a Tabs bar; the 6px top offset and 35px gap of a Wrap image; the 55px above and below a List; no space below an Image; top and bottom padding change together; about 90px inside the end-of-page contact Experience Fragment, above its buttons; a button's minimum width (550px on desktop, 345px with Fixed Minimum Width and on phones); Image and Title links open in the same tab; Card List images are cropped to 2:1; Flex Container items always have equal widths; a table's width and column widths cannot be set; Text with Image never enlarges its image.
