Page Acceptance Guidelines

Macnica Americas migration to global2 · Version 2.0 · 01 October 2026

For Anion and Macnica Americas

Scope: The Macnica Americas pages migrated from GWI to global2.

Built on: our own review questions and Anion's answers so far, plus the open questions still pending an answer.

Status of this version: this document replaces v1.0 guideline values with our team's own decisions and Anion's confirmed answers. Where neither side has settled a point yet, it is marked To define rather than carrying over a proposed value.

Contents

1. Confirmed Guidelines (answered by Anion)

2. Open Questions (sent to Anion, no answer yet)

3. To Define (not yet discussed with Anion)

4. Answer Log

---

1. Confirmed Guidelines

Each entry below has an answer from Anion. It is treated as settled and ready to apply.

C1 — Table formatting (TQ Systems pages)

Page: TQMLS1028A-embedded-cortexr-a72

Question asked:

What formatting is required for tables? Reduced width for the first column? Centered?

Anion's answer:

The table stays left-aligned at full width. TQ Systems' current table formatting is OK — no change needed. Anion will work with their IT team on a broader table solution going forward. For tables with few words, leave 30% width.

Status: Confirmed — no action needed on this page's table.

C2 — Title above end-of-page buttons

Page: TQMLS1028A-embedded-cortexr-a72 (and the same pattern elsewhere)

Question asked:

Should the title above the end buttons follow GWI exactly (present where GWI has it, absent where it doesn't), even though GWI is inconsistent?

Anion's answer:

Remove all titles above the end buttons.

Status: Confirmed — this is now the rule for every page with end-of-page buttons, not just this one.

C3 — Image + text restructuring when GWI shows a lone image

Page: IBASE IB836

Question asked:

Is it acceptable to add text beside an image that has none on GWI, to avoid a large standalone image?

Anion's answer:

This structural change is acceptable, but the title hierarchy and content consistency must be kept — no content from the original page may be lost in the restructuring.

Status: Confirmed as a general approach: pairing a lone GWI image with text is allowed, provided heading levels stay correct and no content is dropped.

C4 — Button alignment (horizontal rows)

Page: IBASE EC-7100

Question asked:

What alignment is expected for a row of buttons with no title above them?

Anion's answer:

For horizontal alignment, use 4 Flex Containers and the "Fit to Text" styling property for long button titles.

Status: Confirmed — this is the pattern to use for horizontal button rows, especially with long labels.

C5 — Spacing below section titles (CSS-driven gap)

Page: IEI AFL3-W19C-ULT5

Question asked:

The gap between a title (e.g. "Introducing the AFL3 Series") and the content below it is generated automatically by the title's CSS and can't be removed on our side — what's the fix?

Anion's answer:

Anion will raise this with their IT team as a platform-level question. For now, keep the page as it is.

Status: Confirmed — no page-level action required; this is tracked as a platform question on Anion's side.

C6 — Table header alignment

Page: IEI AFL3-W19C-ULT5 (and other pages with the same table pattern)

Question asked:

The tables match GWI exactly — what specifically is wrong with the headers?

Anion's answer:

Align all table headers at center, not only the first column/header.

Status: Confirmed — center-align every header cell in a table, not just the leftmost one.

C7 — Two images side by side vs. paired with text

Page: IEI FLEX AIoT Developer Kit Gen II

Question asked:

Why was "spacing in content" flagged on this page but not the two large side-by-side images in "Hardware Features," when a similar two-large-images situation was flagged elsewhere?

Anion's answer:

Two images can sit side by side (Flex Container) as long as there is no text to pair with them individually. The final image can be placed in a Text with Image component together with the "About IEI" text.

Status: Confirmed — applies to this page's Hardware Features section and to any similar case: side-by-side images are fine when unpaired with their own text; an image that does have an associated paragraph goes into Text with Image instead.

---

2. Open Questions — Sent to Anion, No Answer Yet

These were asked but have not been answered. Pages that depend on them should not be finalized until an answer arrives.

Q1 — Image + Text Layout Leaving Empty Space

Page: IEI KINO-DH420

We paired a tall image with text to avoid a large standalone image, but there isn't enough text to fill the image's height, leaving empty space above the text. Caught between "no large standalone images" and "no empty space around text" — which do we prioritize, or is there a third option?

Q2 — Missing Titles for PDF Downloads

Page: NVIDIA Jetson AGX Xavier (Downloads tab)

The table already shows each PDF's title and download link explicitly. What correction is expected? A concrete example would help.

Q3 — Card List Layout Validation

Page: news-events, about-us

Is the placement of titles/descriptions below images correct? Is the two-column layout correct, or does it still make images too large? What layout do you recommend?

Q4 — MB991: Heading Rule Scope

Page: MB991

Confirming the rule "Subtitles should not be H1, only the main title should be H1": does this mean every heading below the page title must never be H1, on every page, not just this one? (Business Categories field and title/description gap on this page: already being corrected directly — not blocking.)

Q5 — Helio View Software: Page Scope for Padding Fix

Page: 8. Helio View Software

The padding fix should also apply to "all Altera, Anlog, microchip, on-semiconductor, sitime pages." Is that every page under those five manufacturer families, or only pages using this specific table/component?

Q6 — Terms & Conditions: Spacing and Fonts

Page: Terms & Conditions

Which sections need spacing adjustment, specifically? Which font should be the standard, and where does it currently diverge?

Q7 — Tariff Pass-Through Policy Notification: Wrong Link

Page: points to the GWI (read-only) page, not global2

Did Anion mean to flag the global2 equivalent? Need the correct path to review "no need of BG color" and the 3 spacing issues highlighted.

Q8 — Our Global Solutions / Office Locations: Content Mismatch

Page: locations.html

Flagged as "content mismatch" with no detail — what doesn't match GWI?

Q9 — News Archive: Missing Tags

Page: all news archive pages

"Tags were missed in all news pages, like 'Year' and 'Article date.'" Need one concrete example of where/how these should appear.

Q10 — News Archive: BG Color and Bottom CTAs (consolidated)

Page: 10 individual news archive items (see Appendix / Answer Log)

"Adjust BG color" appears on nearly every news page — what's the correct value, and what's wrong with the current one? Should trailing CTAs be removed from all news archive pages as a standard, or only from the pages explicitly listed?

Q11 — Heading Hierarchy — Proposed Structure

Page: all pages

Our proposal: H1 = page title only; H2 = section titles; H3 = subsection titles; no skipped levels. Does this match what Anion has in mind?

Q12 — Font Size vs. Heading Level

Page: all pages

When a heading is structurally correct but renders too large, our proposal is to adjust font size only (keep the tag) rather than change the heading level (which changes page semantics/SEO/accessibility). Does this match how Anion wants these cases handled?

Q13 — Padding: Smart City & Mobility

Page: smartcity-mobility

Is the current padding solution for the Embedded + Text container good? If not, what's suggested?

Q14 — Padding: Terasic Apollo S10 SOM / Transcend

Page: terasic-apollo-s10-som, transcend

Compare MAI (Americas) and MAE (Europe) — is the current page good? If not, what's suggested? Same question for the Embedded + Text container padding on Transcend.

Q15 — Card List Pages (broader set)

Page: news-events, about-us, partner-with-macnica

Could Anion suggest how to correct these card-list pages?

Q16 — News Archive Example (isolated download pattern)

Page: 2015-09-11-macnica-americas-demonstrates-sonys-ip-live-production

Is the download button solution used here acceptable? Example also referenced: macnica-americas-introduces-100-gbps-mep100-smartnic-with-mac-compatibility.

Q17 — Spacing Issues — General Check

Page: iei-embedded-systems, mb995, sitime-clock-buffers, japan-innovation, contact/download, error

Just need a look to confirm whether these pages need any adjustment.

---

3. To Define — Not Yet Discussed with Anion

These topics exist as formal guidelines in other migration documentation, but we have not raised them with Anion or formed an internal position yet. Listed here only so the guideline numbering has a placeholder — no criteria, values or proposals below are in effect.

- Links — *To define*
- Images (general sizing rules beyond what's in Q1/Q3) — *To define*
- Downloads (general rule beyond PDF titles in Q2) — *To define*
- Page width and side padding (general value, beyond Q13/Q14 specific pages) — *To define*
- Vertical spacing (general values) — *To define*
- Background bands (general rule, beyond Q10's news-page case) — *To define*
- Videos — *To define*
- Buttons (general end-of-page rule, beyond C4's horizontal case) — *To define*
- Tabs and in-page menus — *To define*
- Lists of child pages (general rule, beyond Q3/Q15 card lists) — *To define*
- Alignment (general rule) — *To define*
- Page properties — *To define*
- Phone view — *To define*

---

4. Answer Log

#	Page(s)	Topic	Status
C1	TQMLS1028A	Table formatting	Confirmed
C2	TQMLS1028A	Title above buttons	Confirmed
C3	IBASE IB836	Image+text restructuring	Confirmed
C4	IBASE EC-7100	Button alignment	Confirmed
C5	IEI AFL3-W19C-ULT5	Title/content spacing	Confirmed (no page action)
C6	IEI AFL3-W19C-ULT5	Table header alignment	Confirmed
C7	IEI FLEX AIoT Dev Kit Gen II	Side-by-side images	Confirmed
Q1	IEI KINO-DH420	Image+text empty space	Pending
Q2	NVIDIA Jetson AGX Xavier	PDF titles	Pending
Q3	news-events, about-us	Card list layout	Pending
Q4	MB991	Heading rule scope	Pending
Q5	Helio View Software	Padding page scope	Pending
Q6	Terms & Conditions	Spacing/fonts	Pending
Q7	Tariff Pass-Through	Wrong link	Pending
Q8	Locations	Content mismatch	Pending
Q9	News archive (all)	Missing tags	Pending
Q10	News archive (10 pages)	BG color / CTAs	Pending

#	Page(s)	Topic	Status
Q11	All pages	Heading hierarchy	Pending
Q12	All pages	Font size vs. heading level	Pending
Q13	Smart City & Mobility	Padding	Pending
Q14	Terasic Apollo S10 SOM, Transcend	Padding	Pending
Q15	news-events, about-us, partner-with-macnica	Card list (broader)	Pending
Q16	News archive example	Download button	Pending
Q17	6 pages	General spacing check	Pending
